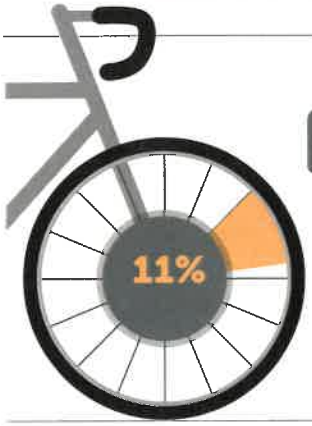
Kids and Wheeled Sports Safety

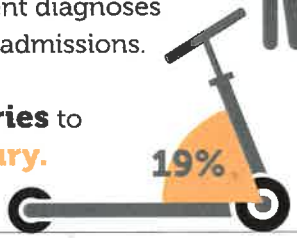
Every hour, nearly 50 children visit emergency departments with an injury related to **bikes, scooters, skates or skateboards.**



Serious head injuries (concussions, internal injuries and fractures) made up 11% of ED visits across the four wheeled sports.

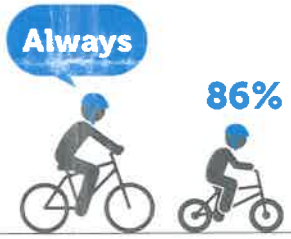
Fractures to the **shoulder, arm, elbow, wrist or hand** were the most frequent diagnoses for hospital admissions.

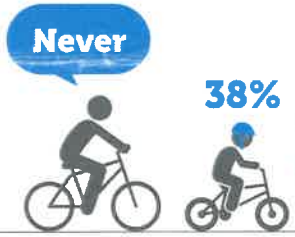
19% of hospital admissions for **scooter injuries** to children in 2015 were because of a **head injury.**



Almost 40% of parents of children ages 5-14 years indicated that their **child did not always wear a helmet** when participating in one of the four wheeled sports.

Among parents who say they **always wear a helmet** when riding a bike, 86% say their child also does. However, among parents who say they **never wear a helmet**, only 38% say their child always does.





Reasons why parents report their **children do not always wear a helmet:**

47% Parents think area is safe/View child as experienced/Don't see helmets as necessary.

27% Child finds helmet uncomfortable.

24% Other kids don't wear one.

22% Child thinks helmets aren't cool.

Top Tips to Keep Kids Safe on Wheels

- All riders should wear a properly-fitted helmet. It is the best way to prevent head injuries and death.
- Ensuring correct fit of a helmet can increase comfort and use.
- Knee pads and elbow pads are recommended for scooters, skaters and skateboarders. Wrist guards are also recommended for skaters and skateboarders.

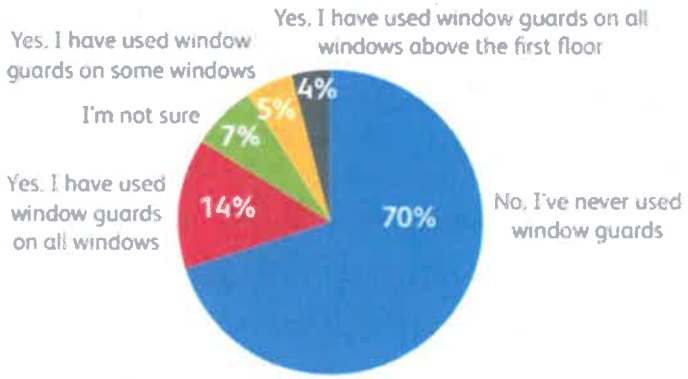
REVENTING CHILD WINDOW FALLS

s open up and the risk for window falls increases. According to a report by Safe eight children age 5 and younger die and more than 3,300 are injured each year alls are the most common unintentional injury requiring hospitalization for children.

or window guards or stops, as they're not designed to prevent children from falling ws. Children under age seven are at particular risk, and caregivers are often present at the time of the fall, so supervision alone is not enough to prevent a window fall. (Safekids.org)

Safe Kids surveyed parents about home window safety. Seventy percent of parents surveyed say they have never used window guards or stops that prevent windows from opening (Safekids.org).

Safe Kids Survey Question: Do you use window guards or stops that prevent windows from opening far enough for a child to fall out, or have you used them in the past?



Yes, I have used window guards on all windows above the first floor
Yes, I have used window guards on some windows
I'm not sure
Yes, I have used window guards on all windows
No, I've never used window guards

Screens keep bugs out, not kids in.
Install window stops so that windows do not open more than 4 inches.
Actively supervise kids around open windows.
Move furniture away from windows to prevent kids from climbing.

Learn more about securing your home against child window falls with these **Window Safety Tips**:

Don't rely on insect screens to protect kids from falling from open windows; they are designed to keep bugs out, not to keep children in.

Install window stops, which limit window openings to 4 inches or less, to child-accessible windows. Make sure to purchase one with a quick-release feature so adults can open the window to escape during a fire or emergency.

- Install an operable window guard if you must open a window within a child's reach. Choose window guards that can be removed by an adult in an emergency.
- Don't place furniture such as chairs, sofas and tables near windows. Remove accessibility to open windows for curious climbers.
- When opening a window for ventilation, use windows that are located out of the reach of children.
- Teach children not to play near windows, balconies, and patio doors and don't allow children to jump on beds or furniture.

5/13

$h = \frac{3 + 12}{7} = \frac{15}{7} = h\ 2\frac{1}{7}$ SOMEHOW IT SHOULD = 1

1 for Sunday (read directions for finally mod 7)

it would seem 7 goes into 15 2 times with 1 extra ($7 \times 2 = 14$) $14 - 15 = -1$ (3/or) 1 = Sunday

$1 = \frac{9 + 12}{7}$ (mod 7) SO mod; + def (not provided)

But example below

5. $\frac{2}{4} \bmod 7 = 3$

Zeiters Equation works 2 times

Problem #2

$0 = 9 + \left[\frac{13(6)}{5}\right] + 26 + \left[\frac{26}{4}\right] + \left[\frac{20}{4}\right] - 40$

1 with mod 7

50

$9 + 15 + 26 + 6 + 5 - 40$

$61 - 40 = 21$

$\frac{21}{7} = 0$ ★

allegedly next 7th will be the 9th

The 9th does this work?

$13/7 = 6$ (13-7=6

$27/7 = 6$ (21=3, 6 left over to = 27)

$7/7 = \emptyset$

$8/7 = 1$

$9/7 = 2$

$10/7 = 3$

$11/7 = 4$

$12/7 = 5$

$13/7 = 6$

$14/7 = \emptyset$

Done on Bus to ...

5/13

It's strange to find the schism & are heads of the churches that claim to be Christian, responsible for the genocide (thou shalt not kill- does that mean they are not Christian, or (Not Conscious) & fall back to the Robot who broke the 4th law & also earth worship (if you knew a larger amount of Death COULD BE PREVENTED by a certain # of broadcast/brain failures/ (other Deaths)

HOW to complain to a pastor/head of Church/ priest WHY Kain & Able needed to die to preserve Seths lineage & THE GARDEN of creatures)

BASICALLY, does it make ye upset? to save more life by ridding the non-believers/NON-KNOWERS from their insult

→ slightly, but & have come to the same conclusion over & over, IF I CONCLUDE (BUT I CANT BUILD THEIR TRUST FOUNDATION without 5/3. E
